

ABOUT US

BOSAQ is **the circular water technology company** that ensures a reliable high-quality process water supply both for businesses (process water) and communities (drinking water).

Our solutions minimize water cost and maximize water security, without impacting the environment.

Our values

01

Create
economic
value

02

Environment
friendly

03

Have a
social
impact

Our ambition is a world where everyone has access to premium drinking water and process water is produced in a circular way.

FOCUS ON INDUSTRIES

Currently, we offer tailored solutions to Food & Beverage industry, the Chemical industry, and water-intensive companies across Flanders, and internationally. As water is a strategic resource we are growing fast to cover the world.

We focus on these sectors specifically due to the water-intensive processes, our in-depth experience of working with these industries, and the call for more sustainable and cost-effective operations.

CORPORATE SOCIAL RESPONSIBILITY (CSR)

BOSAQ aims to create an impact on its customers and society. Our impact goes beyond SDG 6 "Clean water and sanitation".

INNOVATION - CHEMICAL-FREE HANDLING

Our patented **ElectroClean** technology eliminates the need for the supply (cost) and storage of chemicals for membrane cleaning.

This groundbreaking technology generates cleaning solutions directly on-site and has been developed for drinking water and process water applications.

Our patented modularity and innovative sensors allow for plug & play installation on-site and complete standalone operation.

BOSAQ is structured into 2 business units of which BOSAQ Technology is the technology business unit. Our solutions include

- 01 Decentralized** (off-grid) solutions for **water-intensive companies** for process water treatment.
- 02** Grid-connected containerized solutions for companies especially in Food & Beverage and Chemical industries for circular water use.

We either sell our installations directly (Capex driven) or provide water as a service.

Q-Drop is a cutting-edge modular water technology, that can be powered by renewable energy. It purifies any source of water into high-quality process water with minimal maintenance needs.

Water Experts is the water consultancy business unit of BOSAQ. It acts as a precursor to creating efficient water management. Our experts conduct water scans and map water footprints before devising an integrated water management plan.

Water Experts provides engineering consultancy services on **integrated and sustainable water management** to help **organizations** save water and save money.
